

Hello Nigel

You most likely already have records of these 4 below for the Wyke Farm species lists, but here are my contributions, in case any have not previously been reported:

*Sphaerium corneum* or *Pisidium* sp. (Pea Mussel - aka Pea or Fingernail clam) Freshwater bivalve mollusc - found in the freshwater stream that was surveyed by Steve Brown and others.

*Lymnaea stagnalis* (Great Pond Snail) Found on the exposed mud at the SW edge of the Lake.

*Mustela nivalis* (Weasel) Seen by about 3 people on the track in the Woodland 1 section of the butterfly transect route.

*Argiope bruennichi* (Wasp Spider, female) Photo below.
